PROFESSIONAL SUMMARY

Results-driven Generative AI Engineer specializing in Large Language Models (LLMs), Retrieval-Augmented Generation (RAG) architectures, and production-grade engineering. Proven expertise in architecting scalable machine learning pipelines and developing enterprise-grade AI applications using Python, LangChain, and Hugging Face Transformers. Adept at integrating advanced Natural Language Processing (NLP) models with RESTful APIs (FastAPI, Flask) to optimize full-stack system performance. Seeking to leverage deep learning methodologies, prompt engineering, and Agentic Frameworks to drive intelligent automation and AI-first product development in high-velocity environments.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, Java, SQL, HTML, CSS

AI & Machine Learning: Generative AI, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), Natural Language Processing (NLP), Prompt Engineering, Supervised Fine-Tuning (SFT), Neural Architectures, Semantic Search, Agentic Workflows

Frameworks & Libraries: LangChain, Hugging Face, Transformers, Flask, Streamlit, FastAPI, OpenAI API, LlamaIndex, PyTorch

Tools & Infrastructure: Git, GitHub, VS Code, Postman, Google Colab, Firebase, Docker, CI/CD pipelines

Databases: Vector Databases (Pinecone, ChromaDB, FAISS, PGVector), PostgreSQL, SQL

WORK EXPERIENCE

Freelance / Remote

June 2023 – Present

Generative AI Engineer

- Architected and deployed scalable enterprise-grade AI assistants utilizing Python, LangChain, and OpenAI APIs, successfully serving over 500+ active monthly users with high-availability metrics.
- Automated complex full-stack AI integrations via Flask, FastAPI, and Streamlit, optimizing backend processes and resulting in a 45% reduction in data processing latency.
- Engineered end-to-end AI/ML workflows deploying open-source Hugging Face Transformers, significantly increasing natural language understanding and model accuracy for custom proprietary datasets.
- Designed and implemented advanced Retrieval-Augmented Generation (RAG) pipelines utilizing Vector Databases (Pinecone, ChromaDB) to optimize information extraction and semantic search across vast unstructured data lakes.
- Developed autonomous Agentic Workflows to streamline business logic, integrating multi-step reasoning capabilities into legacy software systems.

DEN Pakistan

July 2025 – September 2025

AI Engineer Intern

- Assisted in the Supervised Fine-Tuning (SFT) of Large Language Models (LLMs) and foundation models to enhance natural language processing capabilities, logic retrieval, and reasoning accuracy.
- Collaborated directly with cross-functional software engineering teams to integrate AI-driven features into core product infrastructure, directly increasing user engagement and retention metrics.
- Optimized and engineered large-scale data preprocessing pipelines for training machine learning datasets, ensuring high-quality, normalized inputs for robust model development.
- Executed continuous evaluation of AI agents and mitigated model hallucinations using data-driven evaluation metrics.

TECHNICAL PROJECTS

ATS Resume Maker – AI-Powered Platform (atsresumemaker.net)

- Built ATS Resume Maker, a free AI-powered platform to build, analyze, and optimize resumes for 100% ATS compliance.
- Designed the platform to help users skip the bots and get the interview by optimizing unstructured resume data against strict ATS parameters.
- Deployed as a completely free, no-signup web application to maximize accessibility and optimize hiring outcomes for job seekers.

Hey J – Personal AI Assistant System

- Engineered a sophisticated voice-activated AI assistant utilizing Python and Hugging Face Transformers designed to execute automated system-level tasks and highly efficient file retrieval protocols.
- Integrated advanced NLP models and prompt engineering techniques to interpret complex natural language commands, enabling seamless system automation and improved user productivity.

EDUCATION

Sukkur IBA University, Pakistan

October 2021 – May 2026

Bachelor of Science in Software Engineering

CERTIFICATIONS

- DeepLearning.AI:** Fine-Tuning Large Language Models (LLMs), Evaluating AI Agents, Generative AI with LLMs
- Hugging Face:** Building Generative AI Applications with Gradio
- Google Cloud Platform (GCP):** Agentic Fundamentals, Attention Mechanism
